# Detailed health records for patients across the largest nonprofit network in California

## **MX Access**

Real-time data about your patients' encounters, medications, lab results, providers, insurance, and claims data, all in one place.

- Make informed clinical decisions based on 2–5 years of longitudinal records from across California
- View data via the MX Access portal or directly in EHR and care coordination systems
- Access a wide range of information collected from various sources such as hospitals, clinics, labs, health plans, and other HIEs
- Address gaps in care, lower the risk of adverse events, avoid duplicate tests and procedures, and improve patient care and follow-up

Put comprehensive health data to work at your organization.

### **Avoid duplicate tests and procedures**

Access patients' laboratory results and radiology reports, avoiding the need for expensive and time-consuming repeat tests.

### **Improve patient flow**

Make quicker and better-informed decisions, improving patient flow where services often back up: in emergency departments and at discharge.

### **Reduce the risk of dangerous drug interactions**

Order medications based on a patient's most updated medication prescriptions and understand what allergies the patient may have.

### **Know the health of new patients**

Rapidly assess the health of new enrollees or attributed patients and reach out promptly to provide the care and help they need.

## **Get Started Today**

You can access your patients' longitudinal health records immediately with MX Access. Our team is ready to get you set up quickly so you can start receiving value today.
